

Provider Data Management

What is the Best Way to Manage Your Provider Data?

Managing provider data has become an overwhelming challenge even for the largest of organizations. Provider data is typically siloed across multiple business units and historically each business unit has its own solution for managing the data. This approach of having disparate applications addresses just one business problem usually to the detriment of overall provider data quality, resulting in inaccurate and duplicate provider data and the risk of financial penalties.

Key Features:

HOSTED PDM SOLUTION:

Perspecta provides a hosted end to end master data management solution that requires no changes to legacy systems, workflows, file formats and solves for the challenge of having provider data living within multiple business units.

EASY ACCESS TO MANAGE YOUR DATA:

Access your provider data for updating, editing and reporting, all interactions with the data is time and date stamped to provide an audit trail of any changes or updates.

MASTER DATA INDEX:

Perspecta's proprietary unified pool of accurate provider data that will be constantly cleansing your provider data ensuring your data is accurate and reducing your financial risk.

SYSTEM OF RECORD:

Provider data will be stored, accessible and exportable to existing internal and external business units and applications ensuring improved data governance and alleviating provider data accuracy and duplication challenges.
